## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 2, 3, 5, 6, 13, 14, 23, 24, 25, 32-34, drawn to cytosines, classified in class 544, subclass 317 and 243.
- II. Claims (none), drawn to thymines and uracils, classified in class 544, subclass 310, 243.
- III. Claims (none), drawn to other unfused pyrimidones, classified in class 544, subclass 315, 2316, 318.
- IV. Claims (none), drawn to adenine, classified in class 544, subclass 277.
- V. Claims (none), drawn to guanines, classified in class 544, subclass 276, 244.
- VI. Claims (none), drawn to other purines, classified in class 544, subclass 264, 265, 269, 244.

Claims 1, 4, 7-12, 15-22, 26-31 and 35-37 link all the groups and will be examined to the extent that these read on the elected invention.

The inventions are distinct, each from the other because of the following reasons:

Each of the assorted nucleobases is distinct, and represents a structurally different type of base. Group VI includes choices such as halopurines, Xanthines, hypoxanthines, etc. For groups I-VI, these are well recognized as being markedly different in their antiviral effects. For example, AZT is an effective anti-AIDS drug, but if the thymine is replaced by adenine, cytosine, etc, there is no effectiveness. Similarly, if the guanine in Acyclovir or carbovir is replaced by uracil, a 6-halopurine, etc, the effectiveness is lost.

Art Unit: 1624

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
